ORIGINAL TRANSCRIPTION

Narrative: Weirdest bad for an adult female complaining of chest pain that started approximately 15 minutes. Prior to our arrival. We found her in her bedroom, laying on laying on her back. She did not appear to be any in any acute distress and she wasn't killed color without any increased work of breathing. She describes the pain of sharp, constant, substernal, localized and non radiating and reproducible to palpation. The pain is also works on inspiration. She says the pain is at about 10 out of 10. Patient currently denies any Associates symptoms such as nausea trauma, pregnancy or difficulty. Breathing. However, patient does have a history of deep vein thrombosis he's in her legs, for which is currently taking Lovenox Patient is currently in good color, breathing normally except she's, mildly, anxious, or at least appears to be aspirin was not administered. Due to the patient's known allergy, her vital signs were as follows: she had a 12-lead perform Showing no stemi and a normal sinus rhythm without any other ectopy. Her blood pressure is 126 over 77. She is a GCSE 15 blood glucose of 82 oxygen saturation of 100 respirator respirations are 18 times a minute, with a heart rate of 58 and IV has been established and locked with normal saline, and that's it
