ORIGINAL TRANSCRIPTION

Narrative: Uber dispatch for a possible overdose arrived on scene to find the patient unresponsive in the left, lateral recumbent position and is found by by standards on the sidewalk. They said they initially found him unresponsive and vomiting. He became alert after painful stimuli induce vomiting once while transport was able to maintain his own Airway, he had a normal medical exam, except for his Ward oriented status. He was not aware or no reason it during transport is GCS was 10. He was placed on the stretcher and seat-belted in cardiac. Monitor was placed. He was inside a sack with no major abnormalities. Noted vital signs were as follows: post 110 respiration 16 blood pressure 122 over 67 GTX 10 glucose 89 spo2 94 % on room air pain, 0 18 gauge IV was established in the left AC with a saline lock. The patient started to become combative for strength. Play some the upper extremities, even transport of the VCU, were Medical Care was turned over to Norfolk staff.
